WE HAVE YOU COVERED
**Buscopan® Injection for horses**

- **Buscopan®** is indicated for the reduction of intestinal pain associated with non-surgical and uncomplicated colic in horses.
- **Buscopan®** relieves pain caused by spasmodic and flatulent colic through its spasmolytic action.
- Fast initial response. Most horses will respond within a few minutes.
- Studies have shown that 88% of Buscopan®-treated horses were rated by veterinarians as a “success” with regards to the reduction of pain.
- Horses treated with Buscopan® showed an overall improvement in the behavioural attitude. More horses were rated as “alert/calm” and were less likely to be “nervous/restless” than non-treated horses.

**Prascend®**

- **Prascend®** is indicated for the control of clinical signs associated with Pituitary Pars Intermedia Dysfunction (Equine Cushing’s Disease) in horses.
- It is currently the only Health Canada-approved treatment for PPID.
- Proven efficacy in clinical trials.
- Prascend® tablets are easily administered or dissolved, enhancing palatability and horses’ acceptance.
- Each box contains 60 tablets for convenient dispensing.
- Prascend® is stable for at least 24 months under label storage conditions allowing for consistent, reliable dosing.

**Sedivet® 1% injection**

- **Sedivet®** is indicated for use as a sedative to facilitate handling, examination, treatment and as a premedication agent prior to general anaesthesia.
- Sedivet® allows standing sedation of adult horses.
- Sedivet® minimizes the typical head drop associated with other sedatives, making it ideal for dental, endoscopic, and head- or neck-related procedures.
- Onset of sedation typically begins within one to two minutes and lasts for 40 to 80 minutes.
- Sedivet® patients generally recover quickly and without struggle or excitement.

**Sputolysin® Powder**

- **Sputolysin®** is indicated as an aid in the treatment of respiratory diseases in the horse where there is difficulty in expectoration and where secretolysis is necessary or desirable.
- Sputolysin® is bronchial mucolytic agent to aid in the treatment of respiratory disease in horses.
- Sputolysin® alters the constituents and viscosity of abnormal respiratory mucus and improves the efficiency of the respiratory tract clearance mechanism.
- Sputolysin® can also be used to treat horses with dry, irritating, non-productive coughs.

**Ventipulmin®**

- **Ventipulmin®** is indicated for the treatment of respiratory disease in horses where it is considered that airway obstruction is due to bronchospasm.
- Bronchodilator for the management of airway constriction associated with respiratory disease in horses.
- Causes smooth muscle in the airway to relax, allowing dilation of constricted airways.
- Decreases thickness of mucus to help improve mucociliary transport.
- Safe and effective when used according to label directions.

**SUPPLEMENTS**

**Equitop® Gonex®**

- **Equitop® Gonex®** supports and stimulates the mobility and maintenance of healthy joints in horses.
- Provides the raw ingredients for promoting the natural functioning of joints and connective tissue.
- 100% natural source.

**Equitop® Myoplast®**

- **Equitop® Myoplast®** is a unique high quality amino acid supplement.
- Provides the raw ingredients for lean muscle development.
- 100% natural source.

**Equitop® Pronutrin®**

- **Equitop® Pronutrin®** maintains gastric health and provides extra nutrition in various conditions, particularly beneficial in stressed horses.
- **Equitop® Pronutrin®** contains 77% Apolectol®, a patented combination of fruit and vegetable fibre, glycerol and lecithin which prevents the increase of gastric acid and stabilizes the natural balance of the stomach mucous layer.
**Calvenza®**

**EQUINE INFLUENZA (EIV)/RHINOPNEUMONITIS (EHV) VACCINE**

- Calvenza® has been shown to provide protection from severe equine influenza challenge for at least 12 months following previous vaccination.
- Calvenza® has been updated and contains the emerging Clade 1 North American EIV strain (Ohio/2003), as well as an established North American EIV strain (Kentucky/2/95). Also incorporates a relevant Eurasian EIV strain (Newmarket/2/93).
- Calvenza® and Vetera® XP are currently the only vaccines sold in Canada that contain any of the EIV viruses currently recommended by the OIE Expert Committee.
- Provides protection against both EHV-1 & EHV-4.
- Safe, inactivated vaccine.
- Flexible intranasal or intramuscular dose administration.

**Vetera® and Vetera® XP**

**EQUINE INFLUENZA (EIV) / RHINOPNEUMONITIS (EHV), EASTERN - [EEE] / WESTERN- [WEE] ENCEPHALOMYELITIS, TETANUS TOXOID AND WEST NILE VIRUS (WNV) COMBINATION VACCINES**

- The new and updated Vetera® XP vaccines contain the OIE-recommended equine influenza viruses including the Richmond/07 strain.
- Calvenza® and Vetera® XP are currently the only vaccines sold in Canada that contain any of the EIV viruses currently recommended by the OIE Expert Committee.
- Incorporates a 2005 equine isolate of West Nile Virus that protects against the strains most likely to infect horses today.
- 12 month duration of protection against WNV demonstrated using intrathecal WNV challenge method which is considered to be the gold standard for challenge studies.
- Vetera® XP provides a 6 month DOI proven by challenge for EIV.
